*****Please Note*****

Sale order is the SAME as the catalog order.

Welcome to the 12th Annual Edie Creek Angus 2-Year Old Bull Sale!

2018 brought us the driest growing season in recent memory, and although the cool, wet (& snowy) weather that we got in the fall will partially replenish soil moisture for 2019, it was a very tough year on the forage supplies in our area. Half or less of usual hay was made, and pastures were under extreme pressure: many of our paddocks had very little regrowth after the first short-duration graze off. We were very grateful for a bit of help from two different neighbours whose land we fenced off & grazed for the first time, which gave us almost 4 weeks of grazing for our main cowherd. We also got two weeks of late fall grazing of the high-energy grazing blend of Union Forage brassicas & ryegrass. Because of these great things, we were able to hold off winter feeding until November 26th. We certainly wondered in August if we'd even manage to keep grazing until the 1st of November!

The forage shortage hurried up our plan to tighten our focus on our registered herd, as we sold 50 bred females in December 2018 to reduce the amount of mouths to feed around here for the winter, as well as refine our herd to cow families that work best in our program. Having cows that thrive in your forage environment is a big part of ranch profitability. This is one of our primary goals for providing our customers with genetics that work on many levels.

The Edie Creek Angus Program raises registered Angus cattle with the same or tougher management as our commercial customers raise their cattle in. No extra feed or fancy treatments. Our 2-Year Old bulls are raised responsibly and go to work without the shock to the system that yearling bulls fed a high-energy ration would get. Our herd calves on pasture in May on their own. No one checks them overnight. We push these cattle to excel in a low input system so that they & their daughters can do the same at your place. Besides the obvious expense of feed, labour is a huge expense, and if you have less trouble with calving, you have more time for important things.

Having sold bulls into all the Canadian provinces so far except 3 of the Atlantic provinces, we were excited to sell 4 bulls into 3 American States last year for the first time: Minnesota, N. Dakota, and Montana. Two of the bulls went to Feiring Angus Ranch in ND, and the high-selling Red Angus bull sold to Cody McDaniel in MT of Pharo Cattle Co. Pharo Cattle Co sells 1,000 bulls/year with a similar low-input, forage-focused program as ours.

There will be **20 bulls** available in the sale that will be 4-star or 5-star **calving ease heifer bulls**. 8 bulls will be from an OCC Homer 650H son that we had brought up from OCC. We lost him unfortunately after his first calf crop. There will be 5 sons of MH Tubby 56, 10 deep-made sons of OCC Easy Red 868A, 9 Titan sons, and the last 6 natural-service sons of OCC Worthy Man. There are also 2 embryo sons of the highly productive OCC Karen 759N cow who had one of the best udders we've seen.

We've expanded our registered herd to the point where we no longer need to keep all of our good replacement heifers for in-herd growth. So after many years of requests for Edie Creek females, we are **now offering for the first time a group of 21 Edie Creek Angus Bred Heifers** in this sale. They are AI'd to calve starting in late April to Edie Creek bulls or other AI sires from a similar program.

As our kids continue to grow up, our focus on low-input cattle that are profitable for our customers becomes stronger, since profitable customers allow us to do what we love: raise quality breeding stock and raise our kids on a farm where they can learn about life, love, & hard work. **Thank you** for your interest in our program and for your support in the past. We will continue to provide breeding stock that are raised in real-world conditions so that they suit your needs.

With much gratitude,

Jonathan & Stefan Bouw & Families

MH Tubby 56 daughter

EPD's: BW: -4.4 WW: 23 YW: 35 MILK: 19 CED: +17

OCC Bout Time 806B was the easiest calving bull we have ever had. He averaged 66lbs on his bull calves and 65lbs on his heifer calves. We lost him after his first breeding season, and we did not get any semen collected on him, so these will be his only sons & daughters to sell at auction. His sire OCC Homer 650H has been used heavily as a "sure thing" in heifer projects down in the US over the last 20 years, and Homer daughters make excellent cows. His granddam also happens to be the dam of OCC Worthy Man 967W!

EPD's: BW: +0.8 WW: 27 YW: 47 MILK: 20 CED: +9

MH Titan 752 will increase fertility and longevity in any pedigree he is in. He bred 40+ cows as a 11yr old bull, and looks great going into his 12th year. His breeder, Monte Howrey, said "Titan: the older he gets, the more I appreciate him. Just no holes in him: feet are great, Athletic, incredible disposition, looks like he could breed cows for another 4 or 5yrs. Fertile and highly intelligent...he's probably the most USEFUL bull I have ever bred." Titan comes from the same cow family as DDA Emblazon 27C, the AI sire of the lot 9 & 47 bull. We don't think you'll find better feet on a mature bull than Titan's.

Worthy Man was one Amazing Bull. He stayed fat as a seal and added thickness and length to his calves, plus he corrected pelvic structure. Everyone who saw him commented that they had never seen such an apple shaped rump on an Angus bull. Worthy Man needed lots of exercise in the winter to keep him from getting overweight. He has really made some powerful, head-turning sons for this years sale. Super easy fleshing & masculine, leaves easy keeping daughters that mother up really well.

Eddie Creek Great One 79Y is a solid calving ease bull who came as an embryo directly from Ohlde Cattle Co. He can be used to add length and tidy up feet and udders on cattle. His two full sisters are great producers for us & beautifully feminine cows, they've sold some great bulls through our sale themselves. 79Y is a Great Plains son, making him a half brother to MH Titan 752. He also sires good dispositions and functional females with longevity.

Here's an extremely rare opportunity to acquire a direct **Embryo Transplant** son of Beckton Epic R397, whose semen is no longer available in Canada. We've had Epic sons working in the Yablonski, Myhre (6Z bull pictured on page 36), Granberg & Campbell herds. This embryo son of our great Crowfoot Lady cow had the high-selling Easy Red son last year who went down to Pharo Cattle Co producer Cody McDaniel in Montana. This bull will make some excellent productive daughters.

NOT REGISTERED, COULD BE IF NEEDED

Digging into the impressive Easy Red sire group again, here's a **cow bull** that'll pass on a bit of extra frame compared to most ECA bulls, PLUS the thickness & depth of the Easy Red bull that will add up to big payweights. Dam is bred back at age 12, and is a big-bodied cow now recognized as an Elite Dam in Canadian Angus Records. 152E started out a bit bigger, but kept on growing, posting a 127 index on the grass performance test. Full Brother sold to Dallas Klassen, Rorketon, MB.

Here's a really unique opportunity to pick up a peek at the future. Big Time 848C is our Jr. herdsire who bred cleanup on Tubby's pasture when Tubby got injured. 848C is a son of OCC Big Time & our donor cow OCC Dixie Erica 693N, whom we plan to build our herd around in the future. There will be lots of these 848C's in the next sales, and this bull has been very impressive in the group despite his considerable younger age. We are thinking that these 848C's will have a bit of extra gas in the tank... Another bonus is that he's a grandson of the OCC Karen 759N donor.

December 2018

Did You Know?

- **Reproduction** is the most important factor affecting profitability
- Reproduction is **5X** more important than growth rate, and **10X** more important than carcass quality when it comes to profit.
- **Body Condition** has the greatest impact on reproduction. (*"Edie Creek bulls will sire Easier Fleshing Cows that can hold Body Condition"*)
- Thin cows are only **half** as productive as those in optimum condition
- Every missed breeding cycle represents a 42 lb loss in weaning weight.

These Tubby sons are really useful genetic tools, and it's hard to say which one is the best, but this guy is really good. With foundation OCC bulls Great Plains, Legacy, Eureka & Broadside behind him, and a functional young 15B cow as his dam, this guy will reliably transmit maternal greatness. While there isn't yet an "EPD" for Immunity, MH Tubby's dam, the Mina 836 cow cared for her calves well enough that they never got sick. Coincidence, maybe? But why wouldn't that be a heritable trait? Maternal goodness may be hard to quantify, but selecting for it repeatedly really can result in an improved calving season.

EPD's: CED: -3 BW: +5.1 WW: 29 YW: 53 MILK: 21

A chunky Titan son out of our reliable Lady Erica Cow family, his great-Granddam is still going now at age 18. Definitely in the cow-bull category, he will add rib and muscle to a set of cows and tidy up the udders. Dam 15Z is an attentive mother who is built like a tank! 126E Ratio'd 100 on the Grazing test, so his gains on grass were just fine.

One nice thing about selling 2-Yr old bulls is that we have another year to evaluate the dam before selling a bull: although this bull was born late, his dam pulled herself 27 days forward in the calving season for a 338-day calving interval, demonstrating that she's a productive & fertile cow. The 38Z cow is a bigger-framed cow with a tidy udder who gets the job done at age 7 & going strong. You can count on some stylish & productive daughters from this bull.

This excellent bull will be a solid female producer. His dam is an ELITE DAM in Canadian Angus records, pregnant again at age 14, and his granddam 10K had 13 calves on our Ranch before she retired. Function & Longevity locked in on his maternal side. His sire 6B is a Worthy Man son we kept for ourselves out of the full sister to our 79Y bull, Dixie Erica 62Y. She is an outstanding cow in many ways. 6B was lost to injury unfortunately after a short breeding career. Neat bull.

We didn't use much OCC Legacy semen in the AI season for this calf crop, but knew that the 1B cow would blend well with Legacy. As always, we plan our matings to get the best cows possible, so we were disappointed that this guy was a bull instead of a heifer calf, but he's sure to bring that maternal goodness into your herd. Along with maternal skills, he'll make beautiful cows with excellent udders and structure. Some tried & true Edie Creek genetics here!

Here's a stylish son of DDA Emblazon 27C, the 5-frame, 2300 lb bull that is widely regarded for the broody, long-living females he produces. 27C also stems from the same cow family as our Senior herdsire MH Titan 752. Dam 154U has one of the tightest udders for a cow her age that we've seen. Very good maternal merit in this bull. You'll get lively calves that nurse well and turn into excellent cows.

Customer Testimonials

"I have been keeping daughters of your bulls as cows. I find that they are very efficient "easy keepers" with good maternal instincts & pleasant dispositions. I hope to have a lot more of these daughters in my cow herd.

- Mark Emilson, Vogar, MB

"We've been using Edie Creek genetics for about 10 years to produce low maintenance replacement females in our commercial herd. The bulls have all been easy keeping, functional and fertile. Their daughters have moved our herd closer to our goal of cows that require no supplement or assistance."

- Hans Myhre, Myhre Land & Cattle, Dauphin,

This is officially your last chance to acquire an OCC Bout Time 806B son. They will be extremely easy calving on a set of heifers. The OCC genetics also give you calves that get up and nurse with laser-like focus & quickness. They may not be the heaviest weaning sire group you'll have, but each of the heifers should have a live calf, and the weaning weight of a dead calf is a lot lower! 41E Grew well on the Grazing test too with a 123 Index!

21 Select Bred Heifers

Born and Raised at Edie Creek Angus

We are excited to offer you bred heifers for the first time at our bull sale! These heifers have been raised without any grain, corn silage or pellets. We will pull them off the field where they are bale grazing, a day before the bull sale. This year we have 6 F1 Black FleckAngus, 12 PB Black Angus, 2 Black commercials and 1 PB Red Angus. The Heifers will be selling in groups of 3, all as commercial heifers. We will only transfer papers if heifers sell for \$2500 or more.

This past summer we bred AI on natural heats for 7 days, then gave Estrumate to the heifers that had not cycled yet, & had a couple busy days of AI. After this 10 day project, they were turned out to pasture where they were exposed for 42 days. The natural service bulls used were ECA 2D (OCC Hunter 928H son) and ECA 155D (OCC Paxton 730P son), out of two of our top donor cows. **Due to start calving April 27th, 2019**

Our Long term goal is to supply our customers with Purebred and F1 females that can be used to create a profitable cowherd factory which you can then cross with terminal sires to add hybrid vigour, performance and the "flavour of the day" in hide colour. Doing this will create a functional, long-living cowherd that will wean calves at the highest efficiency in your commercial ranch environment. The Opportunity is yours!

Fall of 2018 - Edie Creek Merle 49E Sells in the first package of 3 bred heifers to enter the ring.

These Elite FleckAngus Heifers are sired by our Fullblood Fleckvieh bull - Double Bar D Abesly 308D. They sell together.

“Why use an Edie Creek Angus Bull?”

We are 19 years into the journey of genetic progress and have learned many lessons along the way. There is no such thing as “free lunch”: not in physics, economics, or in producing beef cattle. If you want more production, you’re gonna have to pay for it with more feed inputs to get there. Finding the balance of performance that suits your environment truly is the sweet spot in beef production. Solar Energy is the closest thing we have to a “free lunch”, so we need to maximize our capture of solar energy, with cow herds that turn low quality forages (grass) into high quality protein (beef).

We have come to believe that getting the cowherd right is the most important foundation for beef production, since feeding that “cow factory” is your biggest expense. Matching your cowherd to the resources in your environment is the next most important step after reducing your inputs. Edie Creek Angus bulls can help you with both of those, creating more profit within your cow herd.

Our bulls are bred with generations of fleshing ability, fertility, capacity, correct feet, longevity and sire beautiful udders. Our Bulls will sire calves that are born easily and nurse quickly. They will establish an efficient, Maternal “Cowherd Factory” for you which can then be mated with Terminal sires to add hybrid vigour performance and the "flavour of the day" in hide colour. Doing this will create a functional, long-living cowherd that will wean calves at the highest efficiency in your commercial ranch environment.

MODERATE-MATERNAL-EASY CALVING-EASY FLESHING

Edie Creek bulls will consistently put their stamp on their calves, ensuring a uniform calf crop, because they aren’t a wild mix of genes from the “Hottest” sires of the day. They are methodically bred with profit for the commercial cow man as their central purpose, not full of “popular” bulls who were fluffed well and fed hard. The 2-Year Old bulls in this sale are red-meat-packing breeding machines that will breed more cows for more years & add POUNDS without adding FRAME.

We are familiar with the Angus gene pool well enough to know what works & doesn't work in a non-pampered real ranch environment. We have been using A.I., & E.T. to help us move ahead with our gene pool, not making it wider, but deeper. This enables us to offer a more consistent pen of bulls every year. We are tightening the screws on reproductive longevity by shortening our breeding seasons for both heifers and cows—Heifers only saw a bull for 42 days, and the cows saw Angus bulls for the first 42 days, and a Fleckvieh bull for the last cycle—Thus ensuring only the most fertile females produce offspring we can select purebred parent stock from.

The focus of our breeding goals remains to increase the profitability of the commercial cattle producers by offering consistent, quality genetics that enable them to improve their efficiency, increase the reproductive longevity of their cowherds in harsh commercial ranching environments, & reduce their input costs of feed & labour.

We really enjoy visiting with cattlefolks, so please give us a call if you want to talk about our breeding program or any of the bulls for sale or stop by anytime for a tour!

Hope to see you March 9th!

Jonathan & Stefan Bouw

Bull Development

These bulls have been raised on their mothers' milk and grass. They were weaned in late November, then brought in and fed Grass-Alfalfa silage with 2.5 lbs of barley and free choice 1st cut hay. In June they were turned out to pasture, with no supplements, where they grew well until the middle of November 2018. At this time, they came home and received green feed oat haylage & 6.75 lbs of crushed peas and 5lbs of grass seed screenings. They have not been pushed with hard feed so that they will breed longer for you. These are hard muscled bulls, not dough boys.

Bull Program

Bulls can be kept at Edie Creek Angus for \$2/day until May 1st. After that, the cost will be \$3/day. Free delivery available to Ashern Auction Mart. **If you haul your bull on Sale day we will give you a \$50 discount on each bull.** Bulls ***MUST be insured*** if they are to be kept on our farm.

TERMS AND CONDITIONS

The terms of sale are by cash or cheque. Settlement to be made immediately after the completion of the sale. The right of property will not pass until after settlement is made. Bulls will not be released until settlement is made.

Bids:

Every animal entering the sale ring will be sold to the highest bidder and may be subject to a minimum/reserve bid.

Disputes:

In case of disputes, bidding will be re-opened between the parties involved. If no further bid is made, the buyer will be the person from whom the auctioneer accepted the last bid. The auctioneer's decision on all disputes is final.

Announcements and Changes:

All announcements and changes made from the auction block will take precedence over the printed matter in this catalogue. Buyers are therefore cautioned to pay close attention to any such announcements.

Purchaser's Risk:

Each animal becomes the risk of the purchaser as soon as the auctioneers hammer falls for the final time.

Liabilities:

All persons attending the sale do so at their own risk and sellers assume no liability, legal or otherwise, for any accidents occurring in or about the premises.

GUARANTEE:

The **Bulls** have been evaluated for breeding soundness and semen quality by Beausejour Animal Hospital. We guarantee to provide you with a **sound, fertile bull** at the point of sale. Should your bull fail to be a satisfactory breeder in his first breeding season, he will be **replaced** with a bull of equal value **or** a credit will be given towards the purchase of another bull. We will not provide the replacement or credit for a bull that is physically injured or mismanaged. It is the responsibility of the buyer to insure their bulls.

The **Bred Heifers** were preg checked safe in calf on November 21, 2018 by Beausejour Animal Hospital. They had 1 chance at AI between July 16th - 27th. They were then exposed for 2 cycles, and the bulls were pulled on September 7th, 2018. No guarantee is given that a pregnant female will deliver a live calf, nor that she will carry the calf full term.

“” BULL RATINGS EXPLAINED:**

Calving Ease:

Based on the bull's birthweight, his parents' birthweight, and his own EPD's. Also based on the assumption that the bull will be breeding small-framed Angus/British cattle--if the bull will be breeding larger-framed Continental cattle, a three-star (***) bull may work on heifers without any trouble. These are simply **guidelines** to help your decision making. You are ultimately responsible for the matings of your own cattle.

Calving Ease Rating:

"*" - Suitable for breeding cows only - 100 lb+ Birth weights possible

"**"- Suitable for breeding smaller cows-90 lb+ Birth weights possible

"***" - Suitable for breeding cows and larger-framed, mature heifers - 85 lb BW's

"****"-Suitable for breeding heifers & cows too

"*****"-HEIFER BULL, easy deliveries with vigorous calves at birth!

Udder Rating:

Based on the quality of the dam's udder structure and teat shape and size. Rated between "1" - "5", a score of "3" would be an average, functional udder; while a score of "5" would be a perfectly level udder with small, shapely teats.

Forage Rating:

Designed to predict the ability of the bull's offspring to thrive in a forage-only environment. The forage rating is also a suitable indicator of the bull's own **ability to stay in good flesh** on a low-energy ration ("easy-keeping-ness"). Rated between "1" - "5", a score of "3" would be moderately easy fleshing, while a score of "5" would be very easy fleshing and his offspring would finish on forages alone.
